

9. Perspective Projection

07 February 2024 12:28

Camera lies on the world coordinate frame.

Image Plane is at a distance of f from the camera frame c . This distance is called as "Focal Length (f)"

← Camera
coordinate
Frame (c)

← World
coordinate
Frame (w)

The goal is to know the relative position of 'c' wrt 'w' to take from point P in 'w' to point x_i in the image plane.

$$X_i = \begin{bmatrix} x_i \\ y_i \end{bmatrix}$$

Image
Coordinates

$$X_c = \begin{bmatrix} x_c \\ y_c \\ z_c \end{bmatrix}$$

Camera
Coordinates

$$X_w = \begin{bmatrix} x_w \\ y_w \\ z_w \end{bmatrix}$$

World
Coordinates

Steps in 3D to 2D Imaging Model:-

① Coordinate Transformation

World
Coordinates

Camera
Coordinates

② Perspective Projection

Camera coordinates \rightarrow Image coordinates

Perspective Projection :-

$$X_i = \begin{bmatrix} x_i \\ y_i \end{bmatrix}$$

Image
Coordinates

$$X_c = \begin{bmatrix} x_c \\ y_c \\ z_c \end{bmatrix}$$

Camera
Coordinates

From diagram,

$$\frac{x_i}{f} = \frac{x_c}{z_c} \quad \text{and} \quad \frac{y_i}{f} = \frac{y_c}{z_c}$$

$$\Rightarrow x_i = f \frac{x_c}{z_c} \quad \text{and} \quad y_i = f \frac{y_c}{z_c} \quad \text{--- (1)}$$

where (u_i, v_i) are the coordinates of points on the image.

If m_x and m_y are the pixel densities (pixels/mm) in x and y directions,

\Rightarrow Top-left corner is origin.

$\Rightarrow (0_x, 0_y)$ is the principle point where optical axis pierces.

Then Pixel coordinates becomes:

from equation ①,

$$\left. \begin{aligned} u &= m_x u_i = m_x f \frac{x_c}{y_c} + o_x \\ v &= m_y v_i = m_y f \frac{x_c}{z_c} + o_y \end{aligned} \right\} \text{--- ②}$$

pixel density focal length

Pixel density and focal length are unknown.
are properties of the camera.

$$\text{let } f_x = m_x f$$

$$f_y = m_y f$$

⇒ put in equation ②

$$u = f_x \frac{x_c}{z_c} + o_x, \quad v = f_y \frac{y_c}{z_c} + o_y$$

$$u = f_x \frac{x_c}{z_c} + o_x, \quad v = f_y \frac{y_c}{z_c} + o_y$$

4 unknowns

$(f_x, f_y) \rightarrow$ focal length in x and y direction.

$(o_x, o_y) \rightarrow$ Principle point.

$(f_x, f_y, o_x, o_y) \rightarrow$ Intrinsic Parameters of the camera.

"Camera's Internal Geometry"
